

# **Style Guide - S.I.D. Technologies**

Team Members: Eva Lomazov (Project Owner/QA Engineer), Emma Seligson (UI/UX Engineer), Tian Lun Lee (Front-End Developer), Brittany Lei (Back-End Developer), Gerome Deguzman (Database Engineer)

## **Python Style Guide**

- 4 spaces per indentation level
- Maximum length of line is 79 characters
- If necessary, line should break after binary operator
- Variables and functions should follow camel case convention
- Methods should just do one thing
- Operators and assignments should be separated by a space (eg. `i = i + 1`)
- Consistent method and variable naming, with the names explaining their purpose
- Local variables can repeat names (eg. `index` could be used as a local variable in two separate functions)
- Surround top-level function and class definitions with two blank lines.
- Method definitions inside a class are surrounded by a single blank line.
- Extra blank lines may be used (sparingly) to separate groups of related functions. Blank lines may be omitted between a bunch of related one-liners (e.g. a set of dummy implementations).
- Use blank lines in functions, sparingly, to indicate logical sections.
- No unnecessary spaces.
  - Immediately inside parentheses, brackets or braces
  - Between a trailing comma and a following close parenthesis
  - Immediately before a comma, semicolon, or colon
  - Immediately before the open parenthesis that starts the argument of a function call
  - Immediately before the open parenthesis that starts an indexing or slicing

## **HTML Style Guide**

- Use correct document type.
  - Always declare the document type as the first line in your document.
- Close all HTML elements.
- Close empty HTML elements.
- Quote attribute values.
- Always add the alt attribute to images.
- Put spaces around equal signs.
- Avoid long code lines.
- Do not add extra blank lines and indentation
- Do not omit `<html>` and `<body>` and `<head>`
- Use lower case file names
- Use lower case attribute names
- Use lower case element names.
